

✓ DID YOU...

- Ensure the patient completed their intake form that asks about alcohol consumption, smoking habits, and HPV vaccination status?
- Tell the patient you were screening them for oral and oropharyngeal cancers and what the screening consists of?
- Communicate the outcome of the oral cancer screening to your patient?
- Talk to your patients about their risk factors and tell your adult male patients that they are at a higher risk for oropharyngeal cancer?
- Highlight lifestyle changes such as cessation of smoking, betel nut chewing, and reducing and/or stopping alcohol with your patient?
- Highlight the link between HPV and oropharyngeal cancer with your patient and discuss how HPV can be prevented through safe sex practices and vaccination?
- Talk about symptoms of oral cancers and what your patient should be on the lookout for?
- Document your screening, findings, action plan, and any referrals?
- Provide your patient with education or information handouts?
